Lagos, Nigeria.

PROFESSIONAL SUMMARY

I'm a full stack developer who loves asking questions and staying curious. I'm good with Python, and I know my way around JavaScript and React, especially when it comes to crafting web apps. I enjoy solving problems and paying attention to details.

But wait, there's more to me! I'm not just a tech person; I'm a team player who likes to make things run smoothly. I'm always learning and open to different work setups—contract, full-time, part-time—because I'm excited to bring my growing skills to the ever-changing world of software. Let's create some digital magic together!

TECHNOLOGIES

Front End	CSS3, Bootstrap, HTML5, JavaScript, React.js
Back End	Python, Django, Flask, JavaScript, Node.js, Git
Data Manipulation	Pandas
Web Servers	AWS EC2 Instance
Data Stores	SQL, PostgreSQL, MongoDB
Operating Systems	Ubuntu(Linux), Windows 10
Computing& Virtualization	Heroku, Docker, AWS

SELF-DEVELOPMENT & PROJECTS

- Integrated the Python CSV library to process CSV files within a command-line application developed using Python, SQLAlchemy, and Poetry. This application allows users to create and organize files by a folder ID, employing SQLAlchemy ORM for seamless object-to-SQL Server database mapping. This project effectively showcased skills in Python, SQLAlchemy, Poetry, responsive design, problem-solving, and version control with Git.
- Constructed a book inventory web app with proficiency in front-end and back-end development, emphasizing security through robust authentication and authorization measures. Using Python, Flask, PostgreSQL, React.js, JavaScript, Swagger UI, Bootstrap, and Git, the app incorporated a RESTful API and PostgreSQL database for enhanced functionality. The project focused on responsive design, problem-solving, HTML, CSS, cross-browser compatibility, and effective communication, featuring

automated tests for rigorous testing and ensuring application security.

In addition to security measures, the project explored distributed systems, debugging, and database management, contributing to a well-rounded understanding of big data and backend development. Leveraging Docker for efficient deployment, the app hosted on Heroku showcased a comprehensive approach to web development, integrating algorithms and API proficiency into the process, all while maintaining stringent security standards through authentication and authorization practices.

- Developed a task management web app, updating and deleting tasks to streamline task management and enhance productivity for individuals and teams. This project showcased skills in HTML5, CSS3, Python, Flask, MongoDB, responsive design, and problem-solving. The application was deployed using Heroku.
- I developed a photo editing app using Django, PIL, HTML, focusing on observability with logging. The project involved Python, Django, JS, jQuery, HTML, CSS, Terraform, Docker, and AWS. The goal was to enable Facebook login, image uploading/editing, and sharing. Before the front-end work, I used Figma for simple mockups, ensuring alignment with project requirements. AWS was also utilized to gain insights into DevOps, Terraform, and production aspects, adding a broader perspective to my project's development. This hands-on experience enriched my understanding of cloud infrastructure and operational considerations beyond the scope of domain management. Overall, these explorations contributed to the creation of an innovative and user-friendly photo editing app.
- Currently collaborating with a team of two to develop a blogging web application. This ongoing project involves leveraging Python, React, Django, Poetry, PostgreSQL, Git, HTML, CSS, JavaScript, responsive design, problem-solving, cross-browser compatibility, and Agile development methodologies. Effective communication and collaboration are essential components of this Agile team effort.

Technologies: Python, React, Flask, SQLAlchemy, Poetry, Swagger UI, PostgreSQL, Heroku, Django, SQL, Mongo, AWS, Figma

EXPERIENCE

Data Analyst Intern | Heritage Energy Operational Service Ltd | Lagos, Nigeria

JULY 2021 - JAN 2022

Heritage Energy Operational Services Limited (HEOSL) is the Operator of OML-30 on behalf of Nigeria Petroleum Development Company (a subsidiary of Nigerian National Petroleum Corporation) and Shoreline Natural Resources Limited Joint Venture. HEOSL activities cover the spectrum of the upstream oil and gas business. Its operations are concentrated mainly in the Niger Delta.

- Assisted the senior data analyst in conducting a comprehensive analysis of oil and water samples obtained from the field.
- I worked with senior engineers and delivered tasks on time, which helped in honing my skills. •

Incorporated Microsoft Excel as a tool to input and systematically arrange periodic field-collected data •

Regularly communicated progress and updates within an Agile development environment.

EDUCATION

B.Sc | Delta State University, Abraka | Delta, Nigeria (Biochemistry) Dec 2018 – March 2023 • CGPA 3.99
